Order from LC or SLA md\$1.80, ph\$1.80 59-22662

Trans. of unidentified Russian mono. pub. by Ivanovo
Textile Institute.

Reasons are studied for the formation of the layers of
fibers which build up in the clothing of the cylinder and
flats of a carding machine. The study shows that re-
duced tooth height does not completely prevent the
formation.

Consideration is given to: (1) the computation of
stresses in the sections of a conical shell without taking
into consideration the influence of the restraint; (2) the
analysis of the wing in the region of elastic restraint;
(3) the analysis of a multispar triangular wing; (4) an
